## WEAR2<sup>®</sup> PRODUCT

The company strives to disassemble, as much as possible, discarded textile using Wear2<sup>®</sup> Ecostitching Technology. By disassembling and separating textile types, mono streams are created enable sustainable processing with focus on “fiber-for-fiber”.

What if textiles cannot be disassembled?

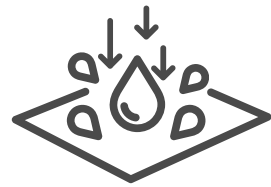

Unfortunately it happens that returned clothing cannot be disassembled. Fortunately though, downcycling sometimes recycling into new sustainable products remains possible which prevents finally ending in the incinerator. A significant part of these textiles can be transformed in to granulate which, in combination with recycled plastic, is perfect for creating various sustainable products.

# WEAR2<sup>®</sup> PRODUCT

## Recycling

95% of the composition  
is secondary raw material

## Non-absorbent

resistant to moisture, water,  
low temperatures

## Durable

40% stronger  
than comparable plastics

Products made of our material can be used to build bridges, forest paths, beach entrances, terraces, promenades, bands to protect sea shores, rivers, lakes and canals, as well as to protect dunes and cliffs.

The material can be machined with all common mechanical devices and is safe to install, even under extreme conditions. It has a high chemical resistance to oils, fats, acids and salts. All the properties of Wear2<sup>®</sup> Product makes it possible to use it externally, wherever natural wood is used, and its durability will save costs in the future.

Upon request, Wear2<sup>®</sup> Product can be enriched with steel profile, fiberglass and your logotyp
